## 1 Purpose

This document describes the Colledia Control configuration file panelsets.xml

The intended audience for the document is system developers and system maintainers.

### 1.1 Introduction

The configuration file panelsets.xml is an INI file that stores configuration settings for the Panelman application. A panel-set is a list of applications that appears on the menu for one or more workstations.

### 1.2 Location

The g\_pnlman.ini file is located at:

%CC\_ROOT%\%CC\_SYSTEM%\config\panelsets.xml

### 1.3 Contents

A panelsets.xml element consists of an id, level and one or more items. Each item refers to an item that appears on the menu bar.

For each item the following items are required:-

- “id” this is the name of the application, and points to the directory that contains the application, it is relative to the %CC\_ROOT%\%CC\_SYSTEM%\panels directory. This should match exactly the corresponding entry in the applications.xml file for captions, icons and titles to be correctly displayed.
- “class”, this indicates the type of panel that is called, the options are:-
  - “application” this launches the application of that name.
  - “instance” this puts an instance on the menu-bar, the appropriate panel for that instance is launched.
  - “devtype”, when the menu item is pushed the user is presented with a list of all of the instances of that type, the panel for the selected instance is then launched.
- “param” is the parameter that is passed to the application when it is launched.

### 1.4 Example Configuration

```
<?xml version="1.0" ?>
<!DOCTYPE panelsets SYSTEM "panelsets.dtd">
<panelsets>
    <set id="eng" level="user">
        <item id="multiview_eca" class="application" param="" />
        <item id="outputctlp" class="application" param="" />
        <item id="allrtrp" class="application" param="" />
        <item id="alarms/logpanel" class="application" param="" />
        <item id="DatabaseNames" class="application" param="" />
    </set>
    <set id="eng_bca" level="user">
        <item id="outputctlp" class="application" param="" />
        <item id="allrtrp" class="application" param="" />
    </set>
</panelsets>
```

```
<item id="alarms/logpanel" class="application"  
param="" />  
</set>  
</panelsets>
```
